

SECTION C (to be completed for **SURFACE WATER SOURCE**)

1. **SOURCE** of water is from _____ which drains into _____
which drains into _____
(major stream or river)

2. **DESCRIPTION** of pump/diversion works: **The pump is** (Circle one): Fixed or Mobile
Pump: Type _____; Diameter _____ inches; Max capacity _____ gallons per minute
(turbine, jet, other)
Power Unit: Type _____; Size _____ horsepower; _____
(electric, tractor, diesel, gasoline, butane, other)

SECTION D **ACREAGE DATA (REQUIRED)**

- 1. **IRRIGATION:** Total crop (row or rice) acreage: _____ acres
- 2. **FISH CULTURE:** Total water acreage: _____ acres
- 3. **WILDLIFE MANAGEMENT:** Total flooded or filled acreage: _____ acres
How many of these acres are also used for Irrigation (listed in item 1 above)? _____ acres
- 4. **REMARKS:** _____

For groundwater withdrawal applications an Acceptable Agricultural Water Efficiency Practices form MUST be completed and submitted with this application. A water use permit MUST be issued before initiating the drilling of a groundwater well.

Additional contact information (Agent, etc.):

(Name)

(Title)

(Address)

(City, State, Zip)

(Telephone No.) _____
(Mobile No.)

(E-mail address)

The **ACCOMPANYING MAP** is hereby declared a part of this application. The **TEN DOLLAR (\$10.00)** permit fee is enclosed herewith.

I hereby attest that I am duly authorized and have legal capacity to execute and deliver this application and that the information provided is accurate to the best of my ability.

Acceptable Agricultural Water Efficiency Practices for MRVA Agricultural Groundwater Withdrawal Permits

Complete all sections that apply to your permitted beneficial use(s) or the application will not be accepted.
Check 'P' for proposed or 'I' for implemented for all methods that you have or intend to apply.

CROPS:

A sprinkler system, such as a center pivot, to supply irrigation water for the permitted acreage or three (3) of the approved practices listed in item 2 must be implemented within 3 years of issuance in order for your permit to remain valid for the full 5-year term:

- 1) A sprinkler system, such as a center pivot, to supply irrigation water for the permitted acreageP or I
- 2) At least three (3) of the following practices (check all that apply):
 - a. Precision land-forming and/or perimeter pads and pipesP or I
 - b. Computerized hole selection, such as Pipe Planner, to supply irrigation water for the permitted acreageP or I
 - c. Irrigation scheduling using either:
 - i. Soil moisture sensor data P or I
 - ii. A water-level indicating device for rice fields P or I
 - d. Surge valve P or I
 - e. A tail-water recovery system to supply at least 25% of the irrigation water for the permitted acreage P or I
 - f. Surface water from a permitted surface water intake to supply at least 75% of the irrigation water for the permitted acreageP or I
 - g. Zero grade or modified zero gradeP or I
 - h. Alternate wetting and drying (rice)P or I
 - i. Side inlet water distributionP or I
 - j. A timer or automatic shut off that can remotely or automatically shut off wells P or I
 - k. A fixed meter and report of annual metered water use to MDEQ by February 1st of each year. (If implemented, please fill out Flowmeter section below.).....P or I

FISH CULTURE:

At least one (1) of the following must be implemented within 3 years of issuance for your permit to remain valid for the full 5-year term:

- 1) A water-level indicating device or pond drain design that allows for significant rainfall capture during the growing season P or I
- 2) A fixed meter and report annual metered water use to MDEQ by February 1st of each year. (If implemented, please fill out Flowmeter section below.).....P or I

WILDLIFE MANAGEMENT:

At least one (1) of the following must be implemented within 3 years of issuance for your permit to remain valid for the full 5-year term:

- 1) A water control structure, such as a slotted board riser, that captures rainfall and runoff to the greatest extent practical. It is recommended that the structure be closed by (a) November 1 or (b) as soon after harvest as possible, whichever is earlierP or I
- 2) A fixed meter and report annual metered water use to MDEQ by February 1st of each year. (If implemented, please fill out Flowmeter section below.).....P or I

(CONTINUED ON BACK)

FLOWMETER (complete this section if you have installed an approved flowmeter and you intend to report water use annually to MDEQ):

Meter Manufacturer: _____ Meter Serial Number: _____

Meter Model Number/Name: _____ Type of Meter: _____

Totalizer Register Unit and Multiplier Factor (AF x .001, gal x 1000, etc): _____

Note: If you indicated you already installed a flowmeter, reporting of your annual water usage will be due by February 1st each year.

I hereby attest that the conservation methods selected above are, or will be, implemented and will be maintained on the land associated with this Groundwater Withdrawal Permit application. I further attest that I am duly authorized and have legal capacity to execute and deliver this form.

**Groundwater Withdrawal Permit Application Acknowledgment Form
For Groundwater Withdrawal Permits/Certificates of Coverage**
(This form must be signed for the permit application to be considered.)

- Since the 1980s, water levels in the Mississippi River Valley Alluvial Aquifer (MRVA) have declined significantly. Although the declines have been greatest in the central Delta, pumping in the other areas of the Delta affects the declines.
- Under Mississippi Law, all water belongs to the citizens of the state, not to the landowner or the person using the water. A permit from the Mississippi Environmental Quality Permit Board is required before any person can drill a well and use waters of the state.
- It is essential that all sections of the permit application be completed accurately. Applications having complete and correct applicant and landowner contact information are necessary for communicating with water users.
- Mississippi Department of Environmental Quality (MDEQ) regulations require that the water use permit be issued PRIOR to drilling the well and that the licensed water well driller must submit a driller's log for the well to MDEQ within 30 days of the date the well is completed. A copy should also be provided to the permit holder. The driller's log is essential for obtaining accurate location and well construction data, which are necessary for effective aquifer management. It is a violation of state law for the permit applicant to allow the driller to drill the well before the permit is issued. Violators are subject to penalties of up to \$25,000 per day.
- State law requires MDEQ to prevent waste or unreasonable use of water. Acceptable agricultural water efficiency practices required by the permit are a tool for conserving water and preventing waste of water. Efficient use of water also relieves pressure on the aquifer, allowing time for all alternative water supplies to be evaluated. The terms of the permit are reevaluated every 5 years based on actions needed to address aquifer conditions.
- By no later than three (3) years from the date the permit is issued, the permit holder must submit documentation to MDEQ on a form and in a manner prescribed by MDEQ that the required minimum number of acceptable agricultural water efficiency practices specified in the permit special terms and conditions (attached) have been implemented. Failure to comply may result in enforcement actions including penalties and/or denial of application or revocation of the permit.
- MDEQ may perform an onsite compliance audit to determine whether the required minimum number of acceptable agricultural water efficiency practices specified in the permit special terms and conditions have been implemented. Failure to comply with the conditions may result in enforcement actions including penalties and/or revocation of the permit.
- MDEQ is working with the United States Geological Survey (USGS) to enhance the USGS's regional water availability model and use the enhanced model to help develop management strategies for addressing the Delta's water quantity issues. The annual water use reports submitted to MDEQ under the voluntary metering program are critical to improving the accuracy of the model. Permit applicants are encouraged to participate in this program. To avoid a mandatory metering program, it is essential for MDEQ to continue to receive annual metered water use reports on 10% of the MRVA wells in each county by February 1 of each year.
- MDEQ and the Delta Sustainable Water Resources Task Force are evaluating all available alternatives to assure that the Delta has adequate water resources for the future.

I hereby acknowledge that I have read and do understand the statements on this form and the attached special terms and conditions. I further attest that I am duly authorized and have legal capacity to execute and deliver this form.
