## **Did You Know . . .**

Each year in Mississippi we throw away enough garbage to cover 600 football fields to a depth of 6 feet in compacted garbage!!!

Our garbage is made up of the following: 41% paper, 18% yard waste, 9% metals, 8% glass, 8% food waste, 7% plastic, and 9% other.

Approximately 40 to 60% of our waste stream is recyclable.

Newspapers are recycled into new newspapers, paper egg cartons, cereal boxes, cellulose household insulation, and acoustical ceiling tiles.

Corrugated boxes are recycled into new corrugated containers.

Aluminum cans and/or aluminum scrap are recycled into metal products made of aluminum including airplanes, cars, and more soda cans.

Steel cans and/or steel scrap are recycled into metal products made of steel including structural steel in building, bolts and nuts, coathangers and more steel cans.

Plastic bottles are recycled into plastic lumber for picnic tables and park benches, carpet, clothing, and more plastic bottles.

Used motor oil is recycled into re-refined motor oil or fuel blended with other fuels to be burned at industry boilers for energy.
