1. Introduction

Hercules Incorporated (Hercules) commissioned Eco-Systems, Inc. (Eco-Systems) to conduct groundwater and surface water monitoring at the Hattiesburg, Mississippi, facility (Figure 1). The sampling was conducted in accordance with the *Corrective Action Plan Revision 01* (CAP) prepared by Groundwater & Environmental Services, Inc., dated January 20, 2005. The CAP was approved by the Mississippi Department of Environmental Quality (MDEQ) in a letter dated January 25, 2005, and modified by MDEQ in an August 18, 2006, letter. The eight quarterly monitoring events specified in the CAP were completed in May 2007 and discussed in the second Annual Monitoring Report (Eco-Systems August 2007). In accordance with MDEQ's approval of Hercules' recommendation in the 2007 Annual Monitoring Report, surface water and groundwater monitoring is currently conducted on a semiannual basis and consists of water level gauging and analysis of select samples for volatile organic compounds (VOCs) (semiannually) and Delnav compounds (annually).

This report describes sampling activities and analytical results for the second semiannual monitoring event for 2011. During this event, water levels were measured at 23 monitoring wells and 13 piezometers, surface water samples were collected from six locations in Greens Creek, and groundwater samples were collected from 23 monitoring wells. However, as coordinated with MDEQ in December 2011, samples were not analyzed for Delnav during this annual event due to low volume of laboratory standard remaining at Bonner Analytical Testing Company and the additional investigation that is proposed in this area as part of the response to the U.S. Environmental Protection Agency's (USEPA's) May 9, 2011, Resource Conservation and Recovery Act 3013(a) Administrative Order (Administrative Order). Future Delnav sampling events will continue to be coordinated with MDEQ.

The site layout, location of monitoring wells and piezometers, and location of Greens Creek are illustrated on Figure 2. A summary of the 2011 semiannual monitoring program is provided on Table 1. Sampling results are compared to MDEQ Tier 1 Target Remedial Goals (TRGs) as referenced in the Final Regulations Governing Brownfields Voluntary Cleanup and Redevelopment in Mississippi (amended 28 February 2002).

2. Regulatory Background

After site investigations conducted under the MDEQ Voluntary Evaluation Program were approved by MDEQ, Hercules submitted the 2005 CAP. The 2005 CAP proposed a combination of institutional controls and monitored natural attenuation of

groundwater and surface water. In January 2008, Hercules and MDEQ entered into a Restricted Use Agreed Order (RUAO; No. 5349 07) to restrict on-site land and groundwater use and document the compliance monitoring program and corrective action requirements described in the 2005 CAP. In conjunction with the RUAO, Hercules executed a Notice of Land Use Restrictions documenting that soil and groundwater contained benzene, chlorobenzene, carbon tetrachloride, chloroform, 1,1,2-dichloroethane, and toluene in excess of MDEQ TRGs. Since 2007, Hercules has conducted groundwater and surface water sampling to comply with the RUAO. Routine monitoring reports summarizing the results of each sampling event have been submitted to MDEQ.

The compliance monitoring program has been modified several times since submittal of the 2005 CAP. In 2006, the sampling frequency for Delnav was reduced from quarterly to annually. In 2007, the sampling frequency for groundwater and surface water was reduced from quarterly to semiannually. In 2009, five wells associated with assessment of the Impoundment Basin (IB) were installed and added to the sampling program. The monitoring program for groundwater and surface water is currently conducted on a semiannual basis and consists of water level gauging and analysis of select samples for VOCs (semiannually) and Delnav (annually).

The CAP included a contingency plan outlining specific actions required in each of the monitored areas if chemicals of concern (CoCs) are detected at concentrations in excess of MDEQ TRGs in select downgradient wells for three consecutive sampling events (Table 1).

3. Field Activities

3.1 Groundwater Elevation Measurements

On December 5, 2011, Eco-Systems personnel collected static groundwater levels from the monitoring wells and piezometers at the site (Table 2). These water level measurements were used to calculate groundwater elevations and evaluate general groundwater flow directions.

3.2 Groundwater Sample Collection

Groundwater sampling was conducted December 6 through 9, 2011. Prior to collecting groundwater samples, the monitoring wells were purged using a low flow/low stress sampling method with a peristaltic pump. Purging was conducted until pH, specific

conductance, and turbidity stabilized. As documented in Section 3.2.1.1.2 of the USEPA Science and Ecosystem Support Division Field Branches Quality System and Technical Procedures (SESD Guidance), stabilization occurs when, for at least three consecutive measurements, pH remains constant within 0.1 Standard Unit, specific conductance varies no more than approximately 5 percent, and turbidity has either stabilized or is below 10 Nephelmetric Turbidity Units. The water quality field parameters were measured with calibrated instruments and recorded in the field book along with the cumulative amount of water evacuated and time of batch parameter testing. Groundwater Collection Logs are attached as Appendix A.

Once field parameters stabilized, groundwater was collected using disposable Teflon bailers and transferred into new, clean sample containers supplied by the analytical laboratory. During groundwater sample collection activities, field replicates were collected for quality assurance and quality control (QA/QC). Each replicate sample was collected by placing alternating aliquots into the parent sample container and each replicate sample container until the containers were filled.

The wells least likely to contain detectable constituent concentrations based upon historical data are generally sampled first. Sample tubing and bailers used during purging and sample collection activities were disposed of after use. Subsequent to sampling, the sample containers were labeled, placed on ice, the cooler sealed and shipped to the designated off-site laboratory for analysis. Chain-of-custody documentation accompanied each sample cooler. Personnel involved in sampling used new, clean, disposable gloves for each sample point. All non-disposable sampling equipment was decontaminated as described in Section 3.5.

During this event, groundwater samples were collected from permanent Monitoring Wells MW-2 through MW-24 in accordance with Table 1. Groundwater samples were shipped via overnight courier to TestAmerica Laboratories, Inc. (TestAmerica) in Savannah, Georgia, for analysis of Appendix IX VOCs according to USEPA Method 8260B.

3.3 Surface Water Sample Collection

On December 5, 2011, six surface water samples were collected from the previously established sampling stations along Greens Creek, CM-00 through CM-05. Samples were collected beginning with the most downstream location (CM-05) and proceeding upstream to each successive sampling location. Surface water samples were collected directly into clean, laboratory-supplied, unpreserved sample containers by

placing the lip of the sample container into the creek at each sampling station. The filled sample containers were labeled, packed, and shipped in the same manner as the groundwater samples discussed in Section 3.2 for analysis of Appendix IX VOCs according to USEPA Method 8260B.

3.4 Quality Assurance/Quality Control

For QA/QC purposes, field duplicate, matrix spike/matrix spike duplicate (MS/MSD), equipment rinsate, equipment blank (field blank), and trip blank samples were submitted for analysis. QA/QC samples were labeled, stored, and shipped to TestAmerica in the same manner as groundwater and surface water samples. QA/QC samples were analyzed for the same constituents as groundwater and surface water samples.

Two duplicate groundwater samples were collected from Monitoring Wells MW-8 (DUPA-120711) and MW-19 (DUPB-120811). The duplicate groundwater samples were collected in alternating aliquots that were placed in each replicate bottle until each bottle was filled.

Two MS/MSD samples were collected from Monitoring Wells MW-8 and MW-22.

Five equipment rinsate sample (RS1-120611, RS2-120611, RS3-120711, RS4-120811, and RS5-120911) were collected during groundwater sampling activities. Because new, disposable tubing was used at each well location, the groundwater equipment rinsate samples were prepared by pouring deionized water over the decontaminated water level indicator probe and collecting the rinsate in laboratory-supplied containers.

Three equipment blank (field blank) samples (EB1-120611, EB2-120711, and EB3-120811) were collected during groundwater sampling activities to test the potential cross-contamination from the laboratory-supplied deionized water. These samples were collected by pouring deionized water directly into laboratory-supplied containers.

One trip blank sample was placed in each sample cooler submitted for analysis to test for potential cross-contamination between samples during shipment. A total of five trip blank samples were submitted between December 5 and December 9, 2011.

3.5 Decontamination

In general, groundwater sampling equipment that would contact the groundwater sample was single-use, disposable equipment. Re-usable groundwater sampling equipment decontamination (e.g., water level indicator probe) was accomplished by the following procedure:

1) Phosphate-free, detergent wash;

2) Potable water rinse;

3) Deionized water rinse;

4) Isopropanol rinse; and

5) Organic-free water rinse or air dry.

If it was necessary to store or transport decontaminated equipment, the decontaminated equipment was placed in either a new, disposable plastic bag or wrapped in new, clean aluminum foil.

3.6 Other Procedures

Procedures for sample collection, sample containerization and packing, sample shipment, cross-contamination control, drummed material disposal, field documentation, chain-of-custody, data review, and other work items not specifically covered in this document were conducted in accordance with the USEPA SESD Guidance.

4. Results

All groundwater and surface water samples collected from the Hercules site were analyzed for Appendix IX VOCs according to USEPA Method 8260B.

Laboratory analytical reports for the samples collected during this monitoring event are included in Appendix C and summarized in Tables 3 through 5.

4.1 Groundwater Elevation and Flow Direction

The potentiometric surface map prepared from the December 5, 2011, groundwater elevations illustrates that groundwater in the uppermost, saturated interval beneath the site tends to follow the surface topography (Figure 3). In the former production areas located in the southeastern portion of the site, the potentiometric surface indicates the presence of a groundwater divide, which trends from southwest to northeast. Groundwater located to the northwest of the divide generally moves in a northwesterly direction toward Greens Creek and groundwater southeast of the divide generally moves in a southeasterly direction. On the north side of Greens Creek, the potentiometric surface indicates that groundwater in the uppermost, saturated interval generally moves in a southerly direction toward Greens Creek. Greens Creek enters the site at the western property boundary and flows in an easterly direction across the northern portion of the site.

4.2 Analytical Results

Concentrations of VOCs in groundwater remain above the MDEQ TRGs in Wells MW-8, MW-13, MW-17, MW-19, MW-21, MW-22, and MW-23 (Figure 4). As observed during previous monitoring events, the predominant VOCs detected in groundwater above TRGs include benzene, carbon tetrachloride, chlorobenzene, chloroform, and toluene. Additionally, chloroform was detected at concentrations above MDEQ TRGs in the surface water samples collected at locations CM-00, CM-01, and CM-02.

An evaluation of the analytical data for each facility area is provided in the following sections. Concentration trend graphs for select wells are provided as Appendix C. In some cases, laboratory dilution caused reporting limits to exceed TRGs for select constituents (for example, in the samples collected from MW-8, MW-17, MW-21, and MW-23 where multiple VOCs were detected at concentrations above MDEQ TRGs). Finally, it should be noted that the laboratory method detection limit for bromodichloromethane (0.25 microgram per liter [µg/L]) was greater than the respective MDEQ TRG (0.168 µg/L) for all samples collected.

4.2.1 Sludge Pits

Groundwater monitoring in the sludge pit area is conducted via sampling of five monitoring wells. Monitoring Wells MW-2 and MW-3 are located north of the sludge pits in historically upgradient positions. Monitoring Wells MW-4, MW-10, and MW-11

are located south of the sludge pits in historically downgradient positions. No VOCs were detected at concentrations above MDEQ TRGs in the sludge pit area.

Chlorobenzene was detected in Well MW-4 at a concentration below the MDEQ TRG. Chlorobenzene has not been detected in MW-4 since 2002; however, the laboratory reporting limit for chlorobenzene was elevated above the TRG for past sampling events and therefore potential detections below 1.0 µg/L could not be verified. No other VOCs were detected in samples collected from sludge pit area Monitoring Wells MW-2, MW-3, MW-4, MW-10, or MW-11. Based on current and historical analytical results, VOCs are not migrating from the sludge pits at concentrations above TRGs.

4.2.2 Greens Creek

The surface water monitoring network consists of five surface water locations along Greens Creek. Surface water location CM-00 is located along the western property boundary in the farthest upstream position. CM-01 through CM-05 are positioned progressively more downstream toward the east where the creek exits the property. Chloroform was detected at concentrations above the MDEQ TRG in the surface water samples collected at CM-00, CM-01, and CM-02 (locations upstream of the sludge pits) and benzene was detected below the MDEQ TRG at surface water sample location CM-03. No other VOCs were detected in any of the remaining surface water samples.

Chloroform has been historically detected at CM-00 and CM-01 at concentrations above TRGs. Although chloroform was not previously detected at CM-02, the laboratory reporting limit for chloroform was elevated above the TRG for the past sampling events and therefore potential detections below 1.0 µg/L could not be verified. Benzene has been historically detected at all surface water locations except CM-00 and the only instance where benzene exceeded the TRG of 5 µg/L was in November 2006 at location CM-01.

Based on the current and historical analytical results, VOCs in excess of TRGs are not migrating from the site via Greens Creek to off-site properties.

4.2.3 Former Landfill

Groundwater monitoring of the former landfill area is conducted using six monitoring wells. Monitoring Wells MW-8 and MW-13 are located south and east of the former

landfill in historically upgradient positions. Monitoring Wells MW-5, MW-6, MW-12, and MW-14 are located north of the former landfill in historically downgradient positions. VOCs were detected at concentrations above MDEQ TRGs in upgradient Wells MW-8 and MW-13. VOCs were detected at concentrations below MDEQ TRGs in downgradient Wells MW-5 and MW-14, and no VOCs were detected in samples collected from downgradient Wells MW-6 or MW-12.

In samples collected from upgradient Well MW-8, benzene, carbon tetrachloride, chlorobenzene, chloroform, and methylene chloride persist at concentrations above MDEQ TRGs. Ethylbenzene, toluene, and total xylenes were detected in MW-8 at concentrations below the respective TRGs, and laboratory dilution caused reporting limits for many of the remaining VOCs to exceed TRGs for the sample collected from MW-8.

In the sample collected from upgradient Well MW-13, benzene, carbon tetrachloride, and chloroform persist at concentrations above MDEQ TRGs. Acetone, chlorobenzene, cis-1,2-dichloroethene, 1-1-dichloroethene, ethylbenzene, tetrachloroethene, and total xylenes were detected in MW-13 at concentrations below their respective TRGs and all remaining VOCs were below the reporting limit.

No VOCs were detected in the samples collected from MW-6 or MW-12. Acetone was detected in MW-5 and MW-14 at concentrations below the respective MDEQ TRG, and chlorobenzene was detected in MW-5 at a concentration below the MDEQ TRG. All remaining VOCs were below the reporting limit. Both acetone and chlorobenzene were historically detected in these wells.

The absence of elevated VOC concentrations in groundwater samples in downgradient wells indicates that VOCs are not migrating from the landfill at concentrations above TRGs. It should also be noted that many of the constituents detected “below TRGs” in Wells MW-5, MW-8, MW-13, and MW-14 had concentrations above the laboratory method detection limits but below the standard laboratory reporting limits and were therefore qualified as approximated values (represented by “J” qualifier in Table 3 and Appendix C).

4.2.4 Eastern Plant Area

Monitoring Wells MW-18 and MW-19, which are located east of the plant buildings, were installed as part of the CAP to serve as “Groundwater area” compliance monitoring wells. Potentiometric information has not indicated that these wells are part

of the previously defined area of groundwater containing VOCs; therefore, Monitoring Wells MW-18 and MW-19 are discussed separately.

No VOCs were detected in MW-18 at concentrations above their respective TRGs. Benzene, chlorobenzene, 1,2-dichloropropane, 1,1-dichloroethene, ethylbenzene, trichloroethene, and total xylenes were detected at concentrations below their respective TRGs. All remaining VOCs were below the reporting limit.

Concentrations of benzene and chloroform above their respective TRGs were detected in samples collected from Monitoring Well MW-19. Acetone, carbon tetrachloride, chlorobenzene, 1,1-dichloroethene, ethylbenzene, tetrachloroethene, toluene, and total xylenes were detected in samples collected from Monitoring Well MW-19 at concentrations below their respective TRGs. All remaining VOCs were below the reporting limit.

It should also be noted that many of the constituents detected "below TRGs" in Wells MW-18 and MW-19 had concentrations above the laboratory method detection limits but below the standard laboratory reporting limits and were therefore qualified as approximated values (represented by a "J" qualifier in Table 3 and Appendix C).

4.2.5 Impoundment Basin

Monitoring Wells MW-20, MW-21, MW-22, MW-23, and MW-24 are located in the vicinity of the IB. These wells were installed and initially sampled in September 2009 as part of a pre-closure investigation of the former IB. Well MW-20 is located west of the IB in an upgradient position. Wells MW-23 and MW-24 are located east of the IB in downgradient positions. Wells MW-21 and MW-22 are located north and south of the IB, crossgradient to the predominant groundwater flow direction. VOCs were detected at concentrations above MDEQ TRGs in Wells MW-21, MW-22, and MW-23. VOCs were detected at concentrations below TRGs in upgradient Well MW-20 and farthest downgradient Well MW-24.

Benzene, chlorobenzene, and ethylbenzene were detected at concentrations below their respective TRGs in Well MW-20. Chlorobenzene was detected at a concentration below the TRG in Well MW-24. All remaining VOCs were below reporting limits. It should be noted that the laboratory method detection limit for bromodichloromethane was greater than the MDEQ TRG for all samples.

Benzene, chlorobenzene, chloroform, 1-1-dichloroethene, methylene chloride, methyl isobutyl ketone, tetrachloroethene, and toluene were detected at concentrations greater than their respective TRGs in the sample collected from Monitoring Well MW-21. Acetone was detected in MW-21 at a concentration less than the TRG. All remaining VOCs were detected below reporting limits; however, sample dilution caused the reporting limits for many of the remaining VOCs to be greater than the applicable TRGs.

Benzene and chloroform were detected at a concentration greater than their respective TRGs in the sample collected from Monitoring Well MW-22. Acetone, chlorobenzene, ethylbenzene, methyl isobutyl ketone, styrene, and toluene were detected at concentrations less than their applicable TRGs and all remaining parameters were below the reporting limit.

Concentrations of acetone, benzene, chloroform, methylene chloride, methyl isobutyl ketone, and toluene were detected above their respective TRGs in downgradient Well MW-23. Carbon disulfide, chlorobenzene, and methyl ethyl ketone were detected in MW-23 at concentrations less than their respective TRGs. All remaining VOCs were detected below the laboratory reporting limit; however, sample dilution caused the reporting limits for many of the remaining VOCs to be greater than the applicable TRGs.

4.2.6 General Groundwater

The monitoring well network for the groundwater area consists of Monitoring Wells MW-7, MW-8, MW-9, MW-15, MW-16, and MW-17 in the vicinity of landfill area and point of compliance Wells MW-18 and MW-19 along the eastern property boundary. VOCs were detected at concentrations above TRGs in Wells MW-8, MW 17, and MW-19. Concentrations of VOCs were detected below TRGs in Wells MW-9, MW-15, MW-16, and MW-18. No VOCs were detected in Well MW-7.

No VOCs were detected above reporting limits in Well MW-7. It should be noted that the laboratory method detection limit for bromodichloromethane was greater than the MDEQ TRG for all samples.

Benzene, chlorobenzene, and 1,1-dichloroethene were detected at concentrations below TRGs in Well MW-9, and acetone was detected at concentrations below TRGs in Wells MW-15 and MW-16. The remaining VOCs for each of these three wells were

below reporting limits. VOC results for MW-18 (also below TRGs) were discussed previously in Section 4.2.4.

Benzene, carbon tetrachloride, chlorobenzene, chloroform, and toluene were detected in Well MW-17 at concentrations above applicable TRGs. cis-1,2-Dichloroethene, ethylbenzene, and total xylenes were detected in Well MW-17 at concentrations below their respective TRGs, and laboratory dilution for matrix interference caused reporting limits for the remaining VOCs to exceed TRGs. VOC results for MW-8 and MW-19 (also above TRGs) were discussed previously in Sections 4.2.3 and 4.2.4, respectively.

4.3 Quality Assurance/Quality Control Sample Analytical Results

Analytical reports for the QA/QC samples are included in Appendix C and summarized in Table 6. A discussion of the QA/QC sample results is included below.

4.3.1 Field Duplicates

Duplicate samples were collected from Wells MW-8 (DUPA-120711) and MW-19 (DUPB-120811). The relative percent difference (RPD) for the MW-8/DUP-120711 sample pair ranged from 0 to 8 percent. The RPD for the MW-19/DUP-120811 sample pair ranged from 0 to 14 percent. No constituents had an RPD greater than 14 percent between the parent and duplicate samples.

4.3.2 Rinsate Samples

Five rinsate samples (RS1-120611, RS2-120611, RS3-120711, RS4-120811, and RS5-120911) were collected during this sampling event. As shown on Table 6, no VOCs were detected in any of the rinsate samples.

4.3.3 Equipment Blank Samples

Three equipment blank (field blanks) samples were collected (EB1-120611, EB2-120711, and EB3-120811) during this sampling event. As shown in Table 6, no VOCs were detected in any of the equipment blank samples.

4.3.4 Trip Blanks

Five trip blank samples were submitted to TestAmerica in coolers containing samples for VOC analysis. VOCs were not detected in any of the trip blank samples.

5. Recommendations

As of this reporting period, CoC concentrations have not changed at the Site to warrant implementation of the contingency measures. The next semiannual sampling event will be conducted in July 2012 in accordance with the 2012 monitoring program summary presented in Table 6. Due to the proximity of Well MW-19 to Providence Street and additional investigation that is proposed in this area as part of the response to USEPA's May 9, 2011, Resource Conservation and Recovery Act 3013(a) Administrative Order, Hercules proposes to coordinate future routine RUAO sampling events with the implementation of the proposed activities. Coordination will result in optimization of sampling activities, facilitating data comparability, and conservation of the Delnav laboratory standards. During the July 2012 event, samples collected from Wells MW-2 through MW-24 will be analyzed for Appendix IX VOCs.

Notes:
Boldface type Compound detected.
Shaded cells indicate that the reported result exceeds the MDEQ_GW.
B Compound detected in the associated method blank.
D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
J Estimated value.
µg/L Micrograms per liter.
MDEQ Mississippi Department of Environmental Quality.
MDEQ_GW MDEQ Tier 1 Target Remediation Goal.
NA Not analyzed.
- - Standard not promulgated/Data not available.
< Less than.
Some Appendix IX parameters not shown due to no detections for that parameter.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Job ID: 680-74946-1

Narrative

Job Narrative
680-74946-1 Revised (Rev2)

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Comments
The sample results were revised at the client's request to report results at the method detection limit (MDL) for Dichlorobromomethane and Chloroform.

No additional comments.

TestAmerica Job ID: 680-74946-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.2 C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	Insufficient volume received for MS/MSD.
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
680-75007-1 Revised (Rev 2)

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) for Iodomethane associated with batch 223411 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No other analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Comments
The sample results were revised at the client's request to report results at the method detection limit (MDL) for Dichlorobromomethane and Chloroform.

No additional comments.

Definitions/Glossary

Client: Ashland Inc.
Project/Site: Hercules Hattiesburg - SA GW DEC 2011

TestAmerica Job ID: 680-75007-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.4 C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	Insufficient volume received for MS/MSD.
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

cc: Craig Derouen

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
680-75076-1 Revised (Rev 2)

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
Method(s) 8260B: The matrix spike (MS) recoveries for batch 223702 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 8260B: The matrix spike duplicate (MSD) recoveries for batch 223702 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 8260B: The continuing calibration verification (CCV) for analytical batch 223702 exceeded average % Drift (%D) control criteria. These are in-house criteria established as limits for these compounds are not specified in the reference method. Additionally, %D for all analytes of concern were within established in-house limits with the exception of iodomethane. This compound has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed, and the data have been reported.

No other analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Comments
The sample results were revised at the client's request to report results at the method detection limit (MDL) for Dichlorobromomethane and Chloroform.

No additional comments.

Definitions/Glossary

Client: Ashland Inc.
Project/Site: Hercules Hattiesburg - SA GW DEC 2011

TestAmerica Job ID: 680-75076-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F	MS or MSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.8 C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
680-75145-1 Revised (Rev 2)

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) for analytical batch 223726 exceeded average % Drift (%D) control criteria. These are in-house criteria established as limits for these compounds that are not specified in the reference method. Additionally, %Ds for all analytes of concern were within established in-house limits; therefore, re-extraction/re-analysis was not performed, and the data have been reported.

Method(s) 8260B: The method blank for batch 223802 contained chlorobenzene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Comments
The sample results were revised at the client's request to report results at the method detection limit (MDL) for Dichlorobromomethane and Chloroform.

No additional comments.

TestAmerica Job ID: 680-75145-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.6 C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the sample IDs on the containers and the COC.	False	-10 & -12: times on bottles read "1409"
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
680-75173-1 Revised (Rev 2)

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
Method(s) 8260B: The continuing calibration verification (CCV) for analytical batch 223898 exceeded control limits for iodomethane. This compound has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed, and these results have been reported.

No other analytical or quality issues were noted.

VOA Prep
No analytical or quality issues were noted.

Comments
The sample results were revised at the client's request to report results at the method detection limit (MDL) for Dichlorobromomethane and Chloroform.

No additional comments.

Definitions/Glossary

Client: Ashland Inc.
Project/Site: Hercules Hattiesburg - GW DEC 2011

TestAmerica Job ID: 680-75173-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Creator: Conner, Keaton

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.1 C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	Insufficient volume received for MS/MSD.
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A
