STATE GEOLOGICAL SURVEY

This map represents the present knowledge of the geologic boundaries of Mississippi. It has been compiled from literature published sources and recent investigations. Special acknowledgments are due Dr. E. W. Hillard of the former State Survey, and recent publications of the U. S. Geological Survey. The map shows the general outlines of the formations, and the topography of the State as determined by the railroad and government surveys. Changes will be necessary as the work of the survey progresses and more detailed work is done.
