**MDEQ Issues Water Contact Advisory for Location in Pass
Christian**
One Advisory Remains

(JACKSON, Miss.) -- The Mississippi Department of Environmental Quality (MDEQ), through its Beach Monitoring Program, issued a water contact advisory Thursday for a sampling station in Harrison County. This segment of beach is not closed; however, there may be an increased risk of illness associated with swimming in this area.

MDEQ is working closely with local officials to advise residents that the water in the following location may have high bacteria levels:

- **Station 5 – Pass Christian West Beach – from Fort Henry east to Elliott Avenue.**

An advisory is still in effect for this station:

- **Station 10 – Gulfport Central Beach – from Alfonso Drive east to Arkansas Avenue.**

When water samples show that levels are safe for human contact, the advisories will be lifted. The Gulf Coast Research Laboratory, which performs water sampling of the Mississippi Gulf Coast beaches for MDEQ, notifies the agency when an area has returned to acceptable levels.

Swimmers are reminded that the Beach Task Force has a standing recommendation that swimming not occur during or within 24 hours of a significant rainfall event.
