## **MDEQ Issues Two Water Contact Advisories**

(JACKSON, Miss.) -- The Mississippi Department of Environmental Quality (MDEQ), through its Beach Monitoring Program, issued two water contact advisories Friday for sampling stations in Hancock County. These segments of beach are not closed; however, there may be an increased risk of illness associated with swimming in these areas.

MDEQ is working closely with local officials to advise residents that the water in the following locations may have high bacteria levels:

- Station 1 -- Lakeshore Beach -- from the Silver Slipper east to the jetty west of Poinset Avenue.
- Station 4 -- Bay St. Louis Beach -- from the box culvert east to Ballantine Street.

In addition, these two stations remain under an advisory:

- Station 5 -- Past Christian West Beach -- from Fort Henry Avenue east to Elliot Street.
- Station 11 -- Gulfport East Beach -- from Tegarden Road east to Anniston Avenue.

When water samples show that levels are safe for human contact, the advisories will be lifted. The Gulf Coast Research Laboratory, which performs water sampling of the Mississippi Gulf Coast beaches for MDEQ, notifies the agency when an area has returned to acceptable levels.

Additionally, swimmers are reminded that the Beach Task Force has a standing recommendation that swimming not occur during or within 24 hours of a significant

rainfall event.
