MDEQ ISSUES WATER CONTACT ADVISORIES FOR TWO LOCATIONS

(JACKSON, Miss.) -- The Mississippi Department of Environmental Quality (MDEQ), through its Beach Monitoring Program, issued water contact advisories today for two sampling stations in Harrison County. These segments of beach are not closed; however, there may be an increased risk of illness associated with swimming in those areas.

MDEQ is working closely with local officials to advise residents that the water in the following locations may have high bacteria levels:

- **Station 6 -- Pass Christian Central Beach -- from Henderson Avenue east to Heirn Avenue.**
- **Station 8 -- Gulfport West Beach -- from Marie Avenue east to Camp Avenue.**

Also:

- **Station 4 -- Bay St. Louis Beach in Hancock County -- still closed for beach re-nourishment**

project.

When water samples show that levels are safe for human contact, the advisories will be lifted. The Gulf Coast Research Laboratory, which performs water sampling of the Mississippi Gulf Coast beaches for MDEQ, notifies the agency when an area has returned to acceptable levels.

Additionally, swimmers are reminded that the Beach Task Force has a standing recommendation that swimming not occur during or within 24 hours of a significant rainfall event.
