Cleanup in Crystal Springs*

CURRENT PROGRESS AND UPCOMING PROJECTS

Soil Vapor Extraction Progress

The Soil Vapor Extraction system is still working efficiently and effectively. The SVE system is operating as usual and routine maintenance is being performed monthly. An annual maintenance event is scheduled in late January which will be only one day of outage. Recent vapor sampling continues to be favorable.

City Water Supply Pipeline

The final stages of well completion on the new city drinking water well on Harmony Road is underway. The permanent pump has been installed and the well is currently undergoing final testing for yield and water quality. Both the initial pump test and water quality results show very favorable results. Final water quality tests will be sent to the state for approvals. Once the final test results have been approved, the controls and piping will be installed for connection to the city water system. This new well will be connected to the proposed new pipeline once it is installed.

City Water Supply

The new water supply pipeline specifications have been reviewed by the City and the bid packages are being prepared for solicitation of quotes by various contractors.

Ground Water Monitoring and Sampling

The semi-annual groundwater monitoring report generated from the last sampling event of the monitor well network is being submitted to MDEQ. The results are encouraging as the impact to groundwater continues to show improvements. The next sampling event will be scheduled in March.

FACT SHEETS AVAILABLE

We understand that the terms sometimes used in the newsletters and reports can be a little confusing. For this reason, fact sheets are always available, upon request, to describe the processes and procedures being used. Any of these fact sheets can be requested by contacting Caffee, Caffee and Associates.

UPCOMING EVENTS

- Continued operation of the full-scale Soil Vapor Extraction system
- Continued monitoring of existing public supply wells
