Gulf Coast Community Ministries (GCCM) has served the Mississippi Gulf Coast for 18 years. One of the ministries we operate is our free medical clinic for anyone who is uninsured. Our clinic is located just two blocks away from Memorial Hospital, one of the largest medical facilities in the state. Our clinic often treats uninsured patients who have non-emergency medical needs. The patient then receives a private and personalized consultation by the attending physician or nurse practitioner who conducts a basic healthcare evaluation. If the patient needs tests or medication, the attending physician or nurse practitioner will provide a referral to a local pharmacy or medical center. GCCM establishes and maintains on-site medical equipment and technology for various procedures. Our goal is to ensure that all patients receive high-quality healthcare services.

MGCCC and universities. The programming will range from manufacturing exposure to training for the most in-demand technician-level positions (e.g., advanced manufacturing) taught by experienced professionals from MGCCC and universities. The Gulf Coast is experiencing rapid economic growth and the demand for skilled labor is increasing. The facility will provide educational programming that evolves from industry partners working with MGCCC and universities to serve the citizens of the Gulf Coast in Jackson County and offer premiere spaces for workforce training—bridging industry, high school, community college, and universities. This facility and the Gulf Coast Workforce Connect project would be located on MGCCC’s Jackson County (JC) Campus; the project is an investment of $24,500,000.

Among the many lessons learned from the COVID-19 pandemic, a primary lesson is that social distancing and shutdowns make teaching classes and training very difficult, almost impossible for some hard skills (e.g., welding). However, MGCCC identified solutions to teach classes, train workers, and ensure skill attainment remotely. The wealth of experience in teaching students and training highly skilled workers positioned MGCCC to shift to remote training while ensuring rigor throughout the pandemic. In order to facilitate remote training in response to COVID-19, the learning spaces in the Gulf Coast Workforce Connect building will feature technology enhanced (aka, HyFlex) classrooms that allow for seamless synchronous communication with students, incumbent workers, and business/industry remotely. That is, the HyFlex classrooms will be equipped with lecture capture and collaboration tools for recording, viewing, and engaging students and colleagues. The classrooms will include interactive touch panels and wireless devices, allowing for students and teachers to collaborate in real-time.

The Gulf Coast's economic recovery is dependent, in part, on expanding opportunities to obtain bachelor's degrees in critical fields, which will also help to future-proof the region. The postsecondary freshman and transfer student pipeline is an important component of this goal. The Gulf Coast Workforce Connect project would be located on MGCCC’s Jackson County (JC) Campus; the project is an investment of $24,500,000.

Under normal operations, the GCCM Free Clinic operates 6-8 times each month serving approximately 8 patients at each clinic. GCCM establishes and maintains on-site medical equipment and technology for various procedures. Our goal is to ensure that all patients receive high-quality healthcare services.
The project implementation includes a variety of activities, such as construction, utility relocation, drainage improvements, and environmental mitigation.

The project also includes enhancements to the Broadwater Marina, which will be included in the Mississippi Sound Remediation Project.

The project is designed to improve infrastructure, create new jobs, and support tourism in the area.

The project is expected to be completed by 2023, with a budget of $280,000,000.

The project will improve the overall corridor's connectivity and safety, and it will support the growth of the regional economy.

The project is expected to create jobs and support businesses in the area, and it will improve access to the Mississippi Sound for tourists and residents.

The project is expected to enhance the quality of life for residents and visitors in the area, and it will support the growth of the regional economy.

The Mississippi Coast Model Railroad Museum Project (Tourism/Economic Development/Infrastructure) Requesting: $1.5 M

The Mississippi Model Railroad Museum project is being developed at the intersection of Hewes Avenue and Pass Road on a 3.26-acre lot in Gulfport, Mississippi. The project supports the Tourism, Economic Development, and Infrastructure categories of the RESTORE emphasis. The site is located on the southern end of the city of Gulfport, and is near the Gulfport-Biloxi International Airport.

The Mississippi Coast Model Railroad Museum will be the first permanent museum of model trains in the state of Mississippi. The museum is currently in the planning stages, and construction will begin in spring/summer of 2022 and estimated completion in summer 2023.

The project will be a unique public facility that is a Visitors Center with a focus on the history of railroads and model railroads. The museum will be designed to be a showcase for model railroads, and will feature a variety of model trains and displays. The museum will also include an education center, which will provide opportunities for visitors to learn about the history of railroads and model railroads.

The museum will be located in the Gulfport-Biloxi International Airport, which is the largest airport in the state of Mississippi. The museum will be open to the public, and will be a significant tourist attraction for the region.

The museum will be a significant economic development driver for the region, and will create a large number of jobs. The museum will also be an important educational resource, and will provide opportunities for visitors to learn about the history of railroads and model railroads.

The museum will be a significant asset for the city of Gulfport, and will be a significant tourist attraction for the region. The museum will be a significant economic development driver for the region, and will create a large number of jobs. The museum will also be an important educational resource, and will provide opportunities for visitors to learn about the history of railroads and model railroads.
